News Briefs

By Who-da Thunk

11/9 was a conspiracy

Earlier today, President Gush revealed that 11/9 was a conspiracy between the Federal Government, the world's largest corporations, and the city of Yew Nork. "We all had had about enough of those fugly World Recreation Center buildings," said the President, "and we decided that, since we couldn't raze them outright, we'd blame their destruction on terrorists." In related news, 9/11, the tragic destruction of the World Trade Center in 2001, was confirmed yet again to be the work of terrorists by the FBI, CIA, and rest of the international intelligence community. In unrelated news, NASA released a statement again confirming that Man has landed on the moon and that yes, the moon itself does exist. If you claim to know more than either of these two organizations and still believe that 9/11 or the moon landing was a gigantic conspiracy or hoax, al-Qaeda is currently hiring.

Easter Bunny commits suicide

Looks like Christians in the United States will have to celebrate the true meaning of the Easter holiday this season. This past Tuesday, the Easter Bunny, the egg-laying commercial genius who radically transformed the Holiest of Holy Days into a candy-and-sugar-coated orgy, committed suicide by apparent overdose on prescription medication. "It's tragic to see him go," commented Santa Claus via a satellite feed from the North Pole. "He was a great guy, awesome at poker, and man, he could really pound one down. I had to keep him from humping the Mrs. more than once." The Easter Bunny is remembered by his 3.4×10^7 surviving children.

Martians say hello

In an unprecedented show of good will, the Martians, residents of our neighboring red planet, have sent the first broad-wave greeting from a benevolent alien race to Planet Earth. Unfortunately, near as scientists can tell, the video is pornographic. "We're not entirely sure what we're looking at," said Dr. Mack Jidgley, head researcher for ITES, "but we're pretty sure that these two are getting it on." The press has yet to see the digital holographogram, but those that have describe it as beautiful and nauseating. "It's like two cantaloupe halves rubbing together with octopus tentacles inserting themselves into human ears," said Jidgley. The Martians, extremely embarrassed by the incident, released the following statement: "Those responsible for the pornoholographogram have been sacked. We come in peace, not porn."

You don't wanna mess with me. Being a semi-truck, President, and robot all at the same time is so awesome!

Gakubowski vs. Gaku-bot-ski

Not-athon Colorpronoun

Aarrggghhhh...

The day after a 3.53 nanofurlong wavelength a natural satellite was visible for 1.786 centifortnights, a confrontation on the scale of King Leonidas I versus Xerxes I of Persia commenced. An exact location for this confrontation was 2531 or 489 digits

of (assuming Times New Roman 68 point font) from the source of this multiple Pulitzer Prize winning document. To ensure that there wouldn't be any interference of the outside world said conflict proceeded exactly at 6:11 ante meridiem on day for Saturn.

The initial conflict was over the use of a device that created Inside-Outside boy.

A stalemate was determined to be the outcome of this conflict, when the state-mandated physical activity (that didn't require any direct supervision or shelter) was brought to an end. This truce almost became permanent when the two parties ceased to reside in the same hectare.

We HAVE kidnapped ONE of THE girls on CAMPUS, STRAIGHT out of her favorite HANGOUT in the quad. We have ALSO decided TO hold her FOR ransom, BECAUSE WE CAN. We WILL RETURN her UNHARMED as SOON as OUR 3 easy DEMANDS ARE MET:
1. Replace THE ARA WITH a TACO BELL. Oh, AND a White CASTLE!
2. BAR all classes with A nickname OR ANAGRAM for THEIR name FROM having FINALS.
3. Increase the NUMBER of girls AT Rose BY 100, 200, 500% !!
That's ALL. And I'd hurry too, as OUR CAPTIVE is looking a LITTLE green AT the MOMENT and her constant badgering ABOUT a FISH IS STARTING to irritate US...

Four new majors to be added to Hose-Rulman

Dizzy McFuzzyFuzz

Yaaaaarr...

On Tuesday, March 27th, Jerald Gakubowski announced that four new majors were coming to campus: Early Childhood Education in the Applied Biology and Biomedical Engineering department, which will now be the ECEABBE department; Music, in the Physics and Optical Engineering department, which will be re-named POEM, which will let them get rid of that silly 'H' that used to be in their name; Interior Design, which will be in the Civil Engineering department ICDE; and Physical Education, which will be in the department of Computer Science and Software Engineering, now PECSSE. Faculty and students alike are having mixed reactions about the new majors on campus.

"This will be an excellent opportunity for students to take courses in a major closely related to theirs. Having more liberal arts degrees on campus will be very beneficial to students," explained Gakubowski, who has been working with faculty to develop interdisciplinary programs and minors that encourage students to branch out.

One junior EE is excited about the new Early Childhood Education program at Rose, since Rose will now be opening up a daycare. "I hate little kids, so at first, I was really upset," she confessed. However, her attitude towards this all changed when she heard some of Gakubowski's ideas for integrating the new ECE major into other curricula. "The chemistry and biology department will use them in their experiments, and there has been some speculation that they will be used in dissection!" she exclaimed.

Students taking PH111 starting next year will find out that there will be much less kinematics and much more wave and vibration analysis.

Handling the hairy issues

Dear Goddess and Mistress,
Please help! My boyfriend is so hairy that I feel like I’m drowning when I hug him. I can’t kiss him without gagging on hair. We’ve tried trimming, but it grows back so fast! It’s like something out of a science fiction movie. What can I do?
—Clogged in Class

Dear Clogged,
You obviously aren’t looking at this the right way, Clogged. You’re so hung up on trying to breathe that you don’t appreciate the fine gift this man is offering you: the gift of eternal warmth and a soft human-hair blanket. If you were with him during our times of zero-degree weather here in

Terre Haute, then surely you appreciate having such a blanket handy. If you weren’t with him then, just wait about 8 months. Put away your scissors, trimmers, and Nair, and just give the man a big hug!
—Mistress Aries

Dear Clogged,
Invest in a weed-eater! I’m sure that’ll take care of his fuzz. If it doesn’t, try Liquid Drano. Ta-da, problem solved. Next?
—Love Goddess Nookie Nookie

Classifieds

White and Nerdy
Albino homosexual Dwarf Hotot seeking straight female Lionhead for threesome with quadruple amputee Checkered Giant. Must have ears longer than 4 inches and thick mane surrounding entire face. Need not be complete physically, only the essential parts for the task at hand. Contact Cottontail Peter for more details, directions, and necessary supplies.

Fake
The following ad is fake

Real
The previous ad is real

Wanted: New Roommate
Trades ok, removal by excessive force preferred

Desperate but Choosy
Single female seeking single rhinoceros. Must have skin as thick as my thigh. Must stamp out all fires when we go camping. Horns greater than 24 inches preferred. Training in the martial art of gorging a dirty sleazebag farthuffer dirtlicker buttcrack ex-boyfriend a necessity. Payment arranged in the form of services provided by a female rhinoceros friend.

Dumb and Righteous
Xenu calling all Thetans for interstellar trip on modified DC-8s. We will visit the sunny islands of Hawaii on Teegeeback for a volcano tour. Ignore the fuel cells on the space planes despite their similarity to hydrogen bombs. Those that are completely psychotic, ambiguously gay, and enjoy jumping on couches can come along for free.

Girls are Grody
Single five-year-old male seeking friendship. A real doctor and dashing special agent. Looking for someone who’s of honor and duty, and appreciates hickory smoked food from a cup. They have to be willing to set people straight with a good hot ... you get the idea.

Male seeking models
Single white male looking for single female, any make or model. Must be smart and beautiful, and be able to endure guy stuff. Religious OK, as long as not self-righteous and will not make it your mission to convert me. Must have universal compatibility with all standard coupling methods. US Mechanical Men Models 456-a through 3544-c need not apply. Rosen Nexus-6’s preferred.

Group fun
Level 70 female blood elf paladin looking for group or a magical relationship. Past boyfriends have said I tend to tap all of the magic out of a relationship, but I’m looking for a new start.

Emo for rent
Down-to-earth, sad guy looking for companionship. Must enjoy painting fingernails and dyeing hair black, wearing all black clothes, and listening to sad music.

Geeky and Alone
Single male seeking female, period. Size does not matter. Earth-shaking or Earth-quaking, bring it on. Need someone to lower my already pathetic self-esteem. Being willing to demean me is a must. Pain acceptable. Crushing (literally or figuratively) one-night-stand preferred. Call me.

Lab?
Tina, will you be my lab partner?

Noise
There is no point to this ad, I just want to say “Onomatopoeia”

The *Hose Thron* welcomes and encourages comments from its readers. We request that all letters to the editor be less than 600 words in length. THE DEADLINE FOR CONTENT SUBMISSION IS 5 P.M. TEN DAYS PRIOR TO PUBLICATION. No matter that this is before the issue you are responding to is likely printed. Just get it in! All content should be submitted to thorn@rose-hulman.edu or to the *Hose Thron* Office (way out in the boondocks of Illinois — and trust us, Illinois has boondocks unlike what Indiana has ever seen; in fact, these boondocks are so boony that). The editors reserve the right to edit submissions for clarity, grammar, length, and factual errors. The editors reserve the right to accept content changes submitted after deadline. All letters must contain the writer’s signature (electronic form is acceptable) and contact information (e-mail address and/or phone number). The views expressed in the *Hose Thron* are those of the original author and do not necessarily represent the views of the *Hose Thron* staff or Hose-Rulman community.

The Physics Department accelerates

Anita Feynman

Timbershiverer

Since such a small group of students at Rose have the privilege of spending four years in the Department of Physics and Optical Engineering, I thought it was prudent to shed some light on its inner workings.

First of all, of course, there are the classes. Whether you're watching a block slide down an incline (*never* up, even if friction exceeds gravity – remember that, kids!) or calculating the transverse modes of an open cavity HeNe laser, there's something for everyone to enjoy. There are different flavors of PHOE students, so if you think you'll miss Con Apps, try engineering physics. If you enjoy some electrical engineering from time to time, mix those circuits with some über-awesome lasers as an

optical engineering major (but don't forget that eye protection!). And, of course, if you're scared of getting a job after just four years in school, go with physics, which makes grad school a must! And, of course, you won't have to take Tech Comm or Economics.

Besides the high action in the classroom, there are labs. Only physics majors can truly appreciate the smell of burning Si diodes in the morning (that's right – 8:05 a.m.!) during PH 325 – but maybe that's because we don't take E-Sys and short circuits are inevitable. If you're an OE, look forward to lens lab upon lens lab in OE 280; determine the focal length of a single lens in 257 fascinating ways! And the lucky engineering physics majors get to do a little of everything (but they don't burn as many diodes).

But behind it all, the reason

the PHOE Department shines amongst the rest is the colorful faculty. Like all the academic departments at Rose, there are many diverse accents and quirky sayings to emulate with infinitely hilarious results. Even better are quirky sayings masked by thick accents. Also, every student is bound to find a professor who matches their unique learning style – be it Dr. Dichard Ritteon's casual yet well-prepared lectures, Dr. Moke Miloney's maelstrom of unreadable derivations, or even Dr. Mack Miklnerney's friendly, lurching instruction style that matches his intimidatingly wide gait.

So if you're still thirsty for some $F = ma$ or $c = f\lambda$ action after PH 113, don't be ashamed to do the fashionable thing: come to the PHOE Department.

1000 Words

Anita Feynman

The above review is total crap

The Magnificent Badger

Big Cheese

The review you just read above this one is probably the worst thing to happen to critical writing since Roger Ebert. I will not give even just one “thumb up” to the journalistic nightmare that you just endured. I will now demonstrate to you how a real review should be written via the cutting critique contained below.

To begin, the author reveals her bias immediately by favoring only certain kinds of punctuation. While periods, commas, em dashes, and exclamation points are well and good in small doses, the complete avoidance of other types of punctuation clearly reveal the author's inner prejudices. Where are the semicolons? The ellipsis? The interrobangs?

Furthermore, the author's prodigious use of the equals sign is not only confusing and misleading, it is also haughty and autochthonous. How can a reader be expected to pay atten-

tion when they are constantly being reminded that things are equal? What if they mistakenly read the symbol and are reminded that things are parallel? What if they are reminded of both? I ask you, what then? *Hmmm?*

I must also address the issue of the need for eye protection addressed in the article. Let me assure you now that the way the author deals with this is an Al Gore-like attempt at popularity through over-inflating an unlikely doomsday scenario. I personally have engaged in a wide variety of activities – chemistry labs, racquetball, bomb defusing, headbutting geese - without eye protection and have yet to have suffered any consequence except a dramatic increase in my overall awesomeness.

On the plus side, the professors mentioned in the above review are my close personal friends and do give it a respectable, scientific feel. But other than that? Not one redeeming attribute.

New majors, from page 1

Another change is that Dick Ritteon, a professor in the POEM department, is giving up his role as Director of the Pinely Observatory so that he may spend more time giving elementary piano lessons in the Musical Acoustics lab. “Planets are cool and everything, but ever since Pluto was kicked from planet status, fewer students have been coming by, so I've decided to do something on a microscopic scale.” Ritteon is working with Fat Perro on developing new materials for piano strings and shells.

“Interior design is just fabulous!” gushed Fabio Fernando, one of the new professors in the ICDE department. “I just LOVE the chance to be working with all

of professors in this department. They're all real sweethearts,” bubbled Fernando. Fernando explained that in order to better merge the labs, the soil lab would be converted into a paint and dye lab so that students could better understand mixing colors and what colors go well together. Students in the IDCE department will also now take an introduction to Interior Design, where teammates will need to make sure everyone is a snazzy dresser and gives friendly, personal presentations of their work.

Nuck Chorris is the director of PE courses in the PECSSE department. Lary Caxer is also having all PECSSE professors teach

one section of Fundamentals of Physical Development I, II, or III each year to better integrate themselves. Chorris is giving a Fast Track version course over the summer, where he will be assisted by Gelton Raves and Loger Rautzenheiser. Raves will be teaching mountain biking and Rautzenheiser will be helping them optimize their movement vectors. Chorris is also considering teaching special sections of Ballroom Dancing and Nuck Kwan Do. All freshmen will be required to take three sections of physical education.

Pilot sections of these courses begins this summer. Contact Man Doore for information on registration.

The Ultimate showdown

Tits McGee

Swabby

It was a warm, balmy night this past Tuesday as the teammates of Take 2 made their way down to the IM fields. There was a slight sting in the air as Take 2 and D-Attic knew they would be clashing in more than just a game of Ultimate Frisbee. As both teams slowly started their warm-ups, the mosquitoes started to bite, making both teams anxious to start the match.

D-Attic won the preliminary battle Rock-Paper-Scissors but decided to let Take 2 receive first. This decision was not in vain however, as D-Attic jumped out to a 2-0 lead. But the members of Take 2 did not just bend over and take it. They

fought hard and kept their spirits up and and responded with 4 scores of their own. D-Attic scored another in the process to make the halftime score a close 4-3 with Take 2 on top.

The second was an electrifying back and forth scoring frenzy. Suddenly, Take 2 found themselves underneath a 8-7 lead by D-Attic with one minute to go. Take 2 pushed hard but lost the disk and gave up a game winning point. Although, it was poainfully obvious that D-Attic had taken the game, Take 2 fought the last 30 seconds of the impassioned Division C Ultimate Frisbee game. It was an incredible game and both teams are projected to do well and make it to the post-season.

Squirrels!

Squirrel Stalker

Peg-Leg

I have been a squirrel stalker for a long time. In my travels I have documented every type of squirrel: from the Cannibalistic Squirrel to the African Desert Sand Squirrel. Only once in my squirrel stalking experience have I had the pleasure of meeting a Cave Squirrel. When I first met Bucky and his lover Deez Nutz, I was surprised at how well kept is cave was. His cave decor was different from any other squirrels I had taken pictures of. The one thing that I learned about Cave Squirrels was the fact that they enjoy discussing squirrel politics. Never discuss their inability to climb trees.

Squirrel Stalker / Hose Thron

Watch out for Bucky, the deadly Cave Squirrel!

The Thorn is selling t-shirts!

This week’s Sam & Max: “Reality 2.0”

This week’s ruling: Ronchi

This week’s mushroom: more!

ME department renamed “Department of Risky Business”

Chac Zambers
Guest Writer

In a surprise move, the Mechanical Engineering Department at Hose-Rulman has traded its historically conservative and low-key demeanor for a brand new image – Institute Bad Boy. Professor Pavid “Kegmeister” Durdy, head of the newly disorganized department, made the announcement last Wednesday at the administrative council, after which he waved his fist in the air and yelled “Bad ass!” several times.

Professor Garrell “Shades” Dibson has embraced the new lack of vision, vowing to convert his beige Mercedes into a float to ruin Homecoming. “This could be a great senior design project,” said Shades. “Too bad I’m going to do it instead. Now, I need to go buy a 55 gallon drum of marbles and some smoke grenades.”

A faculty search committee consisting of Professors Cil “Mac Daddy” Phornwell, Batsy “Toots” Prackin, and Mames “TopGun” Jayhew has been formed to recruit someone specifically named Drunky McFightsalot. “With a name like that, he could be a real utility player,” explained TopGun.

Dean Wart “Futzles” Estern informed the Thron that the Department of Risky Business was on “double secret probation”: one more mistake and they would be in serious trouble. A large water balloon then flew in through the window, soaking his pants as well as a stack of important documents. Professor Ron “The Don” Richards is suspected of throwing the balloon.

How did the Department of Risky Business find themselves on probation? Stated Professor Ferry “Underpants” Jine, “That’s what happens when you party naked.”

Political HSSE scandal

Foo Foo McNuckleberry
Resident Wormtongue

Investigations into the administration of President Beorge Gush have unearthed evidence of an unusual encounter last Saturday night between Rarl Kove, the President’s Deputy Chief of Staff and top political advisor, and a traveling party of Hose-Rulman faculty.

Sources report that while leaving a McDonald’s in the Detroit International Airport, Kove and his security detail encountered Professors Wulia Jilliams, Wanneliese Att, and Foo Foo McNuckleberry. No

words were exchanged, although witnesses report that Kove and McNuckleberry clearly acknowledged one another with an exchange of nods.

A Democratic Congressman, speaking to the Thron on the condition of anonymity, stressed that the exchange does not constitute definitive evidence of McNuckleberry’s involvement in the firing of U.S. Attorneys, disclosure of former CIA operative Palerie Vlame’s spying career, or fabrication of intelligence leading up to the war in Iraq.

“Obviously, that’s an intriguing possibility, and we’ll be looking into that,” the Congressman stated. He also speculated that one of the professors involved might be able to answer long-standing questions about the nature of the toys Kove receives in his Happy Meals. Subpoenas are expected later this week.

Kove has long been among the most controversial figures in the Gush administration, haunted by allegations of illegal activities. Even his supporters acknowledge that his campaigns against the Administration’s critics have been ruthless and Machiavellian. Calls for his resignation, though, have so far been rebuffed. Washington insiders are already speculating as to whether he’ll be able to survive the taint of being associated with English professors.

Witnesses report that Kove and McNuckleberry clearly acknowledged one another with an exchange of nods.
