For engineers, understanding fluid mechanics and dynamics is a crucial skill for their jobs. Colorado Springs-based software company Applied Flow Technology (AFT) recently announced a student version of their pipe flow simulation software AFT Fathom. This enables students to have an easy way to perform thermal engineering analysis and address simulation to other features that are sure to help them in the classroom and on the job.

While company president Trey Walters is a mechanical engineer by trade, he was struck with the idea to write the Fathom software after being introduced to a "relatively new programming language..." - Visual Basic. "When [my colleagues] showed it to me," he explained, "the very first thing I thought of was someone could use this software.

At the same time, the public was pushing "towards much more graphical software" for modelling and simulating, which opened the door of opportunity for Engineers. Programming for fluid transfer is a text-intensive task, so what Walters was writing would change the "shape of what I wrote," as said. "It was a pioneer." After spending a few years writing the program as a hobby, Walters eventually took on the mantle and commercialized the software.

Today, AFT stands indispensable to companies ranging from NASA to Walt Disney. In the context of the United Kingdom, Walters that he, up to having a top-notch support account and high quality software. Working in AFT's favor is its developers.

Just as Walters was a mechanical engineer, he said most of the developers are engineers with back-grounds in modelling. These engi-neers also had a profound understanding of pipe flow. This gave the developers an advantage of thinking straight and hand in crafting the software. As customers would need, it to me," he explained, "it's a product they themselves would have wanted.

In order to quell both of these factions, party. UKIP is a far-right, primarily single market countries typically exports. To have access to the single market, which accounts for a quarter of total UK exports. To have access to the single market countries typically have to agree to the freedom of movement of goods, capital, information, and labor. The free movement of labor, or immigrants, is the thing that many in the UK want to control. So, deeming this part of "Brexit" will be an indicator of how the electorate will vote. Currently, the mechanism to exit the E.U., article 50 of the Lisbon Treaty, has not been engaged. From that point, the UK will have two years to fully exit the clock is ticking, but at least we now have an indicator of how the electorate will vote.

What challenges face the U.K. when navigating "Brexit?" Theresa May has a difficult job of defining what "Brexit" will actually look like. Dr. from the running, as well as Michael Gove, parliament (MP) and leading candidate to the Brexit vote, held on Thursday. In the case of a member state, it may be too soon to know the possible implications. Dr. Casey argued that there is an "incredible temptation to explain the implications, to simply sound-bite and say "who knows."

However, it is important to understand that the very first thing I thought of was someone could use this software. At the same time, the public was pushing "towards much more graphical software" for modelling and simulating, which opened the door of opportunity for Engineers. Programming for fluid transfer is a text-intensive task, so what Walters was writing would change the "shape of what I wrote," as said. "It was a pioneer." After spending a few years writing the program as a hobby, Walters eventually took on the mantle and commercialized the software.

However, it is important to understand that the very first thing I thought of was someone could use this software. At the same time, the public was pushing "towards much more graphical software" for modelling and simulating, which opened the door of opportunity for Engineers. Programming for fluid transfer is a text-intensive task, so what Walters was writing would change the "shape of what I wrote," as said. "It was a pioneer." After spending a few years writing the program as a hobby, Walters eventually took on the mantle and commercialized the software. Walters explained, "Computationally, AFT Fathom does not do anything special that wasn't possible 50 years ago" with text-based software. What set Fathom apart was its ability to take the test processes from the beginning and repackag e it, provide a graphical representation of the data.

For chemical, civil, and mechanical engineers, this software is essential. Even for more focused majors such as aerospace and nuclear engineering, there are convenient applications. Students also have a chance to see how classroom simulations might look.

Walters cited other benefits, ranging from being able to show work and experiment with a model. Students "get instant feedback graphically, and we think there's some value in that. As companies continue to harness AFT's software for engineering projects, they could also become valuable to be familiar with the program before entering the workforce.

AFT Fathom Student can be ordered from the software's website, www.aft.com/students/fathom. The AFT website also features webinars, tutorials, and case studies of Fathom and other AFT software in- to. AFT's favor is its development of a "much more graphical" interface, and make it more user-friendly. "When [my colleagues] showed it to me," he explained, "the very first thing I thought of was someone could use this software. At the same time, the public was pushing "towards much more graphical software" for modelling and simulating, which opened the door of opportunity for Engineers.  ISSUES of The Rose Thorn are published on the second through ninth Mondays of each academic quarter
 WEEKLY MEETINGS are at 7:30 p.m. on the first through ninth Tuesdays of each academic quarter. All members of the Rose-Hulman community are welcome to attend.
 SUBMISSIONS of articles, photographs, art, and letters to the editor is encouraged. Submission may be made by email to thorn@rose-hulman.edu or in person to Percopo room 931. The submission deadline is 5:00 p.m. Friday.
 THE RIGHTS to accept submissions or changes made after the deadline, to edit submissions in so far as the original intent of the submission remains unaltered, and to reject submissions deemed inappropriate for print are reserved by the editors.
 LETTERS TO THE EDITOR should be no longer than 600 words in length and must contain the writer’s (electronic) signature.
 THE VIEWS EXPRESSED herein are those of their respective authors and with the exception of the Staff View do not necessarily represent the views of the staff or the Rose-Hulman community.
The Zika Virus is in the news again as daily reports of a brutal heat wave spread throughout the world. The virus is named after the Zika Forest in Uganda, where it was first isolated in 1947. It has quickly spread to the Americas and is now a global health concern. The virus is transmitted by mosquitoes and can cause severe complications, including Guillain-Barré syndrome and microcephaly. It is spread through sexual activity and can be transmitted by blood transfusions and organ donations. The virus has been found in most of the world and is a serious threat to public health. It is important to take precautions to prevent its spread and to support those affected by it.

Scott Pilgrim vs. The World
If Only Toronto Actually Worked This Way

Curtis Humm
Entertainment Editor

Hollywood is no stranger to bad breakups. Whether your ex goes on to become your arch-nemesis, post mean-spirited comments on your social media site, or just bothered you constantly to take them back, as the movies see it, no one takes rejection well. However, starting a dedicated team of overprotective love interests with the sole purpose of ruining your future dating prospects via duel to the death may take the cake for both level of obsession and overkill.

This is the challenge set before Scott Pilgrim in the aptly named graphic epic epicness “Scott Pilgrim vs. The World.” When Scott (Michael Cera), a between jobs base player from Toronto, meets a girl who roller-bladed straight out of his dreams (almost literally), he immediately drops everything in pursuit of her. Surprisingly enough for the genre, Scott and his phantasmagorical belle, Ramona Flowers, who roller-bladed straight out of his dreams (almost literally), he immediately drops everything in pursuit of her. Surprisingly enough for the genre, Scott and his phantasmagorical belle, Ramona Flowers, (Mary Elizabeth Winstead) share what can technically be construed as a date within the first half hour of the film, but little did our Canadian comrades know that dating Ramona takes a lot more than quirky video game references. No, in the proud tradition of overprotective Greek fathers of old, Scott must fight his way through a gauntlet of fireball slinging, dragon summoning, teleporting, and vegan exes for the privilege of dating Ms. Flowers.

Is the plot campy and nonsensical? Yes. Is the romance realistically or engagingly built up over time? Nope. Is the movie still awesome? You bet! Comedy appears naturally throughout the film, especially with the similar character qualities between his two roles. Of course, the presence of Chris Hemsworth (we may all know him as Thor) adds a special touch to the film. Especially with the similar character qualities between his two roles.

Joseph Lee
Guest Writer

“If there’s something strange in your neighborhood. Who are you gonna call? Ghostbusters!!” The announcement of a new “Ghostbusters” has been met with a lot of concern over the possibility of ruining the nostalgia of the original block-buster. While the reboot has huge boots to fill, it deserves to be given at least a chance, and my “professional opinion” gives it a 4 out of 5 stars. While some may nitpick the lack of humor, and over such a high rating, I shrug and look at the movie for what it is: an attempt to reproduce a light-hearted comedy about spooky things.

The reboot, starring Melissa McCarthy, Kristen Wiig, Kate McKinnon, and Leslie Jones, creates an action packed comedy that brings smiles and laughter to the audience. Of course, the presence of Chris Hemsworth (we may all know him as Thor) adds a special touch to the film. Especially with the similar character qualities between his two roles.

For those who do not know, “Ghostbusters” follows a group of four friends who create a ghost busting agency. Almost like the ghost hunting shows seen on t.v., but much less serious and with more visual representations of the ghosts. In the reboot, Erin Gilbert (Kristen Wiig) gets dismissed from Columbia University due to a previously published book about the paranormal during her younger days. This leads to Gilbert meeting with her co-author Abby Yates (Melissa McCarthy) and a group of other events leads to the formation of the -- drumroll please -- “Ghostbusters.”

It is interesting to see the main theme discussed throughout the movie: what qualifies as science? The issue was the team trying to prove the existence of Ghosts with science, but no one believing them because of... well... Ghosts. I would be one of the skeptics, though the idea of ghosts does make the imagination run.

The visual effects were phenomenal in this film. One can see the 33 year difference between the reboot and original. While many may say the reboot will never live up to the original, the new “Ghostbusters”, when viewed without bias, makes for a good film with plenty of jokes to put a smile on your face. Ultimately, the movie is worth a view.

“With enough clichés to parody and enough twists to keep the audience on their toes, the film is entertaining, if not storytelling, at its best.

However where “Scott Pilgrim vs. The World” truly shines is in the visuals. The movie pays a constant homage to the Bryan Lee comic it was based on, “Scott Pilgrim.” With written in sound effects, classic video game music, and over the top fight sequences shot to resemble the panel by panel action of the source material, the magical land of Toronto comes to life. A delightful mix of Arcade Fighter combat, classic RPG mechanics, Anime-esque expressions, and Comic Book inspired camera-work somehow manages to not only meld together beautifully, but become something more than the sum of its parts. It just adds something extra to a dramatic boat of pulpy when there is a hype up off-screen narrator dramatically proclaiming the length of a combo attack or the timing of a combination strike.

“Scott Pilgrim vs. The World” is a wild ride of stunning visuals, well-constructed gags, memorable characters, and intense action. Defying a conventional genre classification, Pilgrim’s quest to win the girl through over the top violence gives me hope that somebody besides Marvel can make a successful comic book adaption hit the silver screen.
The Great: Ricks

Ricks Smokehouse and grill has been known for their barbecue, fish and general good food for a long time. This restaurant is known to most as the best barbecue in Terre Haute and to others the best barbecue they’ve ever had. The pulled pork and baby back ribs are famous among those who frequent the establishment but in recent times they have added another option to their menu. Traditional wings have made their debut at Rick’s and have quickly become a favorite entree of mine. They coat around 80 cents a wing and although that might seem expensive, Rick’s wings are much larger than those you would find at any other chain such as Buffalo Wild Wings or Wingstop. You can order these wings in with Rick’s Hot, Mild, Sweet or Sweet Heat rubs. Although having said this rick’s wings may have taken the spot for the best wings in Terre Haute.

The Good: Buffalo Wild Wings

Buffalo Wild Wings, also known as “BDubs,” has long been the stop for wings not only in Terre Haute but around the United States. Although with the new emergence of quality wings at Rick’s they no longer are the best wings in the area. That being said they still do by far have the largest variety of wings in the area and will forever be the standard of wings in Terre Haute. Boneless wing Thursdays, priced at 65 cents apiece and half price traditional wing Tuesdays may make it difficult to beat their prices as well as their ambiance.

Gaming Wars

An Insight into the Never Ending War of Gaming

PC Gaming:

Those who game on PC will forever boast about their superiority. When it comes to the quality of their games they are certainly correct. Although when enough time and money is put into one of their customizable machines they are clearly going to have superior quality, higher frame rates, a longer life, and a larger selection of games. However, the price for these high end machines can start at about $1000 dollars and go up from there.

The mythical “console killer” machines that some people have jum ped on the train and heads over there as soon as possible. Wingstop has finally raised the bar with a new option to their menu. The “Dry Rub” wings will have you coughing on all the spices they pack into every wing. This may be the cheapest option by a small margin but the quality of food they offer does not make up for the lack of quality in their food.

Sony’s PlayStation:

The Sony PlayStation has been the long held competitor of the Microsoft Xbox and for a good reason. The Sony PlayStation was released in 1994 with Microsoft in competition. The PlayStation has since found a worthy competitor in the Xbox. The Sony PlayStation 2 is the bestselling console of all time although this does not stop them from innovating and making improvements to win the everlasting console war. Their newest adaptation of the Sony machine dubbed the PS4, has around the same capabilities of the Xbox with a cheaper price tag, the only true differences being their performance in certain titles and console exclusives. They have even gone as far to make a competitor to the future Project Scorpio called the PS4 pro.

Microsoft’s Xbox:

The Microsoft Xbox was released on November 15, 2001 14 years ago and since then has evolved into a much greater product. It became the Xbox and is now known today at the Xbox One S, a slim version of the Xbox one that came out a few years, cost $300 dollars, and included a Kinect. This included a controller, a HDMI cable, power cables, and the machine itself. Today in 2016 you can buy an improved version of the machine minus the Kinect with 1.5 more terabytes of storage space for $400, truly a difference from PC gaming. Xbox has also announced that a higher end model of the machine, dubbed Project Scorpio is in the works. This is supposed to allow the Xbox to function at 60 frames per second, is supposed to allow the Xbox to function at 60 frames per second, is supposed to allow the Xbox to function at 60 frames per second, is supposed to allow the Xbox to function at 60 frames per second, is supposed to allow the Xbox to function at 60 frames per second.

With fall break steadily approaching, the promise of warm home cooked meals and reunions with family pets dances on the worn edges of every Rose student’s brain.

Six weeks of Rose is enough to drive even the strongest willed to the brink of insanity, so we welcome the opportunity for excursions with open arms. Like an abundant oasis in the Rose desert, fall break calls out to us, promising relief and rejuvenation from the coolth of fall quarter. But what we consistently fail to remember is that going home is an equally torturous beast, and that’s why I wrote this to remind you of why.

Unless you’re one of the 0.05% that had the “pleasure” of growing up in Terre Haute, you’re in for a long drive. Summer is over, the sun hasn’t long since retreated into the heavens, and road trips are no longer a fun adventure with your friends, but a chore. This drive will be nothing short of eventful. You’ll have the joy of making awkward conversation with the desperate kid on SpeakerPhone you agreed to drive in a regretful moment of charity. You’ll get to drive at a small’s pace behind an elderly couple for 85 miles. And if you’re especially lucky, you’ll even have the privilege of feeling self-conceited about your music choices while lamenting the nation’s steadily rising gas prices.

Finally, after hours of staring your hometown because your carpool buddy doesn’t know his address, you pull into your neighborhood. You can just barely see it, the light at the end of the not so well designed interstate highway system, your driveway. You’ve made it. For a moment, there’s hope, as nothing stands between you and your family’s unstructured arms.

And then it hits. The first of an incessant wave of variations on, “How was college?” You freeze. The dreaded, “How was your day?” your mom used to drop on you in the car home from school has evolved, returning stronger and with even less of a good answer than it used to. Stunned, you muster a simple, “Good,” and hope that distracts them long enough for you to think of the one interesting thing that happened in the past 6 weeks. (Bonus points if it could be featured in a C-rated movie)

Leverage this time your home was an oasis in itself, the rooming days at home will be nothing but joyful relaxation, right? With no responsibilities, no assignments, no group meetings at ungodly hours, you, the ever-working Rose student, are in hell. Facing an empty abyss where nothing you do, or don’t, do matters, you are swallowed by your complete and utter insignificance.

We long for these days of total freedom and unaccountability, but like all good things, they come to an end. When it comes to going home for fall break however, a few days of boredom is well worth a couple breaths outside the Rose bubble. So if you can, go home, and grow to appreciate even the more torturous elements of your Rose-Hulman education.

Facing an empty abyss where nothing you do, or don’t do, matters, you are swallowed by your complete and utter insignificance.

It’s Time To Sober Up.

Theddson Huyas

Opinions Editor

Earlier in the year, I ran across a number of YouTube videos by Sharif Matar. What were they? Cinematic ads for Gary Johnson.

The Johnson campaign has been intriguing. Ranging from memes to poor-quality videos. Nothing “cinematic”. Nothing that really would make you think it’s a real ad. They feel like quick jobs some schmuck with Windows Movie Maker, a nice webcam, royalty-free music, and some spare time put together. Those terrible Vox/AJ yellowtext videos you see on Facebook, a one-side in itself on the interesting days at home will be nothing but joyful relaxation, right? With no responsibilities, no assignments, no group meetings at ungodly hours, you, the ever-working Rose student, are in hell.

Facing an empty abyss where nothing you do, or don’t, do matters, you are swallowed by your complete and utter insignificance.

They feel like quick jobs some schmuck with Windows Movie Maker, a nice webcam, royalty-free music, and some spare time put together.

just the surface idea and implementation of small government. In fact, aside from rejection of authority, there isn’t a political message at all, just a philosophical one. And it’s up to you to create your vision.

In a campaign of chaos and slander and nitpicking it at least offers clarity and a way out.

They are ordinary videos. They are thought provoking.

So with these options out there, are the PR managers on the Johnson campaign really serious? If they are, get busy. There’s a month left. Leverage the work a random guy has been doing on the internet for free.

And then we get to Johnson’s on-stage performance. Now I get it; U.S. politics is a sham and it shouldn’t be about stage presence and appearance but actual competency and real principles.

But U.S. politics is a sham that’s about stage presence rather than competency, and so needs to be treated as such. Sure, I’m pretty sure to say the least of a few of Weld’s quips, but he has a much, much better stage presence that I feel is suppressed by the fact that he’s number two on the ticket, and doesn’t want to come off as the magnus opin. I think America loves an old guy with an attitude.

Johnson just seems like a clum in delivery. His speech pattern isn’t exactly reassuring. Does it make him seem more humble? Perhaps, but it must definitely makes him seem less genuine and oddly enough, calculating.

It’s half serious campaign, half “eh, it’s worth a shot”. Either go all in or don’t. No one likes a flop-out.

Women’s Soccer Dominates

Marc Schmitt
Editor-in-Chief

Rose-Hulman’s women’s soccer competed in the second annual Gray Matters Awareness Game on Wednesday, September 28. Beating their local rival, the Rose-Hulman women beat St. Mary-of-the-Woods College 5-1.

The charity match, held to bring about awareness for individuals struggling with brain cancer, raised $500. The Fightin’ Engineers scored an impressive three goals in the first 45-minute half. Freshman civil engineering student, Jessica Wells, scored after seven minutes and twenty-four seconds, assisted by Erika Suiz, a junior mechanical engineering student.

Shortly after Wells’ goal, Lauren London scored an unassisted goal against St. Mary-of-the-Woods’ Georgia Mary.

Rose-Hulman’s Denisse Bell, a freshman mechanical engineering student, sunk the third goal of the half. She was assisted by Madeline Romain, a junior civil engineer.

In the second half, Rose-Hulman’s Maddie Twetton, a freshman computer engineer, and Natalie Avato, a senior electrical engineering and economics double major, rounded out the women’s soccer team’s excellent game.

St. Mary-of-the-Woods’ Cami Nava scored an unassisted goal in the second half.

Looking at the game statistics, Rose-Hulman dominated the game, with over two times the shots of St. Mary’s at 14-6. However, Rose’s dominance also extended into fouls, with three times the amount of fouls committed to St. Mary’s at 15-5.

Rose-Hulman’s women’s soccer team will be hosting Earlham on October 5. The game will be played at Rose’s intramural fields, with kickoff at 7 p.m.

Editor-in-Chief

Rose-Hulman’s women’s soccer competed in the second annual Grey Matters Awareness Game on Wednesday, September 28. Beating their local rival, the Rose-Hulman women beat St. Mary-of-the-Woods College 5-1.

The charity match, held to bring about awareness for individuals struggling with brain cancer, raised $500.

The Fighting Engineers scored an impressive three goals in the first 45-minute half. Freshman chemical engineering student, Jessica Wells, scored after seven minutes and twenty-four seconds, assisted by Erika Suiz, a junior mechanical engineering student.

Shortly after Wells’ goal, Lauren London scored an unassisted goal against St. Mary-of-the-Woods’ Georgia Mary.

Rose-Hulman’s Denisse Bell, a freshman mechanical engineering student, sunk the third goal of the half. She was assisted by Madeline Romain, a junior civil engineer.

In the second half, Rose-Hulman’s Maddie Twetton, a freshman computer engineer, and Natalie Avato, a senior electrical engineering and economics double major, rounded out the women’s soccer team’s excellent game.

St. Mary-of-the-Woods’ Cami Nava scored an unassisted goal in the second half.

Looking at the game statistics, Rose-Hulman dominated the game, with over two times the shots of St. Mary’s at 14-6. However, Rose’s dominance also extended into fouls, with three times the amount of fouls committed to St. Mary’s at 15-5.

Rose-Hulman’s women’s soccer team will be hosting Earlham on October 5. The game will be played at Rose’s intramural fields, with kickoff at 7 p.m.

A Poem I cannot make
By Lauren Santichen—Flipside Editor

A cake, I can bake
White icing
And Chocolate flake
While I’d rather
Have a steak,
A poem
I cannot make

An ID
I can fake
To help with
My alcohol intake
So many laws
That does break
But a poem
I cannot make

A Lit class
That I do take
Though my GPA
Is at stake,
Surely,
I must retake,
A poem
I cannot make

Companies,
they do forsake
For my resume
has one mistake
Good review,
Not from Blake
A poem
I cannot make

Dedicated to Dr. Carvill

Hey everybody! Lauren Santichen here to welcome you to the newest issue and tell you: THREE MORE DAYS 'TIL BREAK! Whooh! I am so ready for a break. Anyone else excited? I might be a little too much so since I have my birthday during it and I do love birthdays. Anyway, if you have any comments or questions, feel free to send an email to: Thorn Flipside. I'm always looking for new content, so please send me whatever comes to mind. See you all next week, so have a fun break! -LLS

WACKY PROF QUOTES

“[Turns off the lights] I like this. We should take a nap.”
-Dr. Morris

“A student will always be a student, no matter how old they get.”
-Dr. Minster

“Not much difference between the two actions, right
“I have just proven to you that parallel lines meet.”
-Dr. Laxer

“I think we just broke reality.
How do we do anything? We multiply by a constant. How do we make my height equal to Yao Ming? We multiply by two.”
-Dr. Song

“This is an equation-free zone.”
-Dr. Carvill

“Has Hell frozen over?”

Did your prof say something hilarious or just great out of context? We want to here about it! Send your quotes with who said it to thorn-flipside@rose-hulman.edu.

12. Soviet Spy (Physics)

Since the beginning of Time, Flipside has had yearly debates over whether to be right side up or upside down.

Mr. Up is all about fitting in with the rest of the newspaper and getting the vote of the general public. Mrs. Down, however, wants things to be the way they have always been and to perpetually cause students to flip their computers upside down in order to follow her page.

The debate has gone on long enough. As a voting citizen, you must choose which side is right. To place your vote, go here. Results will be posted in the Opinions section, next issue.
