We miss you Scum Pond :(

In order to restore this gloria-

By Christmas of 2020, one thou-
sand gallons of Chemically Engi-
neered Scum Pond Water will be
pumped into the first floor of the
Union, providing students with an
authentic scum pond experi-
ence to be proud of.

I'm too Sober for this $5/Sh t (Free tequila shots during
Weekly Thirsty Thursdays). However, this just might make a difference. There will be plenty
of opportunities for students to
make memes great again, and provid-
ing to The Director of the FBI.

We believe engineers possess the
critical thinking skills necessary
to create future employees capable
of displacing both rote workers and
social media marketeers, said
the king of /r/memeeconomy.

We have you covered. Keep your office doors wide open for our
(Not sure what the accompanying

The first offering, MEME-
420-09, may seem like a typo at first, but the class
code is actually NOT some
version of 'upper-ME' courses,
but rather a first in poten-
tially more courses offered
by the humanities depart-
ment.

Don't let the 400-
level rating deter you too much,
there are no prerequisites,
although we strongly
suggest that 'somewhat'
proficiency in computer
science be demonstrated.

The course, however, will
not just be for students, any faculty who
can show a pile of tests to grade
exceeding one foot thick for free!
(Statisticians will be on hand to
correlate blood alcohol content to
average score.)

The Council of Mysterious

Photography is a key
aspect of the course,
required of all partici-
pants. The emphasis will be
on creative expression, rather than
practical skills. The course
will involve topics ranging
from basic history
of memes, to current events,
and meme theory.

The class will involve topics
ranging from a brief history
of memes, to twitter memes,
and meme theory.

We believe engineers possess the
right analytical mindset, as well as
a deep appreciation of the nihilistic cul-
ture we live in that drives much of
modern meme production. If we couple
this with solid theory and
a heavy workload, including a
term project of creating a Facebook
page that you could actually use,

The class will involve topics ranging
from a brief history of memes, to
twitter memes, and meme theory.

use photo editing tools just barely
enough to make memes great again, and provid-
ing to The Director of the FBI.

A followup course, MEME480, is
being considered, focusing on how
to use memes to create
new opportunities for
maximum media
sufficiency of r/memeconomy,
according to The Director of the FBI.

We believe engineers possess the
critical thinking skills necessary
to create future employees capable
of displacing both rote workers and
social media marketeers, said the
king of /r/memeeconomy.

The course is not to be confused with
MEME900, Consulting Engineering
Seminar. However, the course would
make you a greatly overqualified en-

COMMUNITY SUPPORTED NEWSPAPER
Trump Makes Rational Statement

An unexpected but refreshing debacle

Bull Shmitt
Ex-President

President Donald Trump made yet another uncharacteristic move on Monday when he managed to make a logical statement.

Speaking at a campaign-style rally in Philadelphia, Trump minced no words in calling off his usual talking points: building a southern border wall that Mexico is going to pay for, making fun of the size of North Korean leader Kim Jong-Un’s nuclear button (Trump’s biggest), and comparing the Russian politician’s telephone calls to The Apprentice. Trump’s off the cuff remarks took an odd turn when he started to lay out his logical statement.

“I was sitting in the crowd listening to the president when he just started rambling about x and y, and he’s a confused rally attendant. I thought Trump was losing his marbles!”

Having defined his variables, Trump began to make a series of declarative sentences. These were a stark departure from the president’s usual style, which often ranged from one subject to another like a rolling ship in rough waters.

Some rally attendees were frustrated with the president’s statements. “For the first time I did not agree with the president, wanted one man. I can’t abide by someone who sets out their declarative sentences before their assertions.”

Cable news networks started broadcasting the rally after Trump made his logical statements. Fox News Sean Hannity interrupted his usual programming to broadcast the rally, passing only to hysterically scream in horror.

“Trump has taken this up. I’m going to do the next job.” Hannity was caught saying to a staffer during a commercial break.

Trump’s brush with rational statements was short-lived. Appearing to come to, Trump again began to speak in his usual style. He returned to his tried-and-true attacks on Jeb Bush, lambasting the former governor for being “low energy” and for selling Goya Brodies during his campaign. After later reporting it was discovered that the president had a minor stroke during the speech. The culprit? Switching from his usual diet of KFC and McDonald’s to a healthy diet.

Hose-Hyneman-Rollins is no stranger to fundraising. As a private engineering college, donations from benefactors sustain the endowment. As a private engineering college, donations from benefactors sustain the endowment. As a private engineering college, donations from benefactors sustain the endowment. As a private engineering college, donations from benefactors sustain the endowment.

However, as the economy continues to stumble, the Board of Trustees recently decided that there had to be another way to keep the lights on without asking students to pay more tuition (rather, to take out greater loans from a different provider because Wells Fargo refuses to give them any more). During the special brainstorming session, Teh Hose Thron learned that the Board was revisiting an idea from Hose-Hyneman-Rollins’s history—back when it was still Hose Polytechnic.

“We are bringing back the Professor-of-the-Month calendar,” one Board member said. “My professor was actually the one responsible for the first time around. He told me, ‘When the going gets tough, the tough release a calendar of those professors.’”

Indeed, Teh Hose Thron conducted an investigation in the John A. Logan Library and discovered this was not the first time Hose-Hyneman-Rollins has resorted to calendars of professors to pay the bills. The first time this was implemented was in 1975 when the Great Depression threatened to close the doors of the school. The faculty banded together to release the Hose Polytechnic pin-up calendar.

Dr. Donald B. Prentice, then president of Hose Poly, was first to sign up in order to save the school. At the December release party, he told the Star, “Hose Polytechnic will not be defeated by any financial crisis, and if that means I wear my best suit and pose like an advertisement for Montgomery Ward, then by God, I’m going to do it. To quote the President of our great country, ‘The only thing we have to fear is fear itself’.”

Unfortunately, Dr. Conwell could not disclose who would be in the 2019 calendar, as the Bushes were there to break campus photographer Bryan Cantwell who would be in it. Too, he, too, was sworn to secrecy so people would buy the calendars first, but suggested RatingProfessors wasn’t a bad place to start. “They have the school’s favorite professors,” he said. “We’ll still take it down from there after we see some photos.”

The Student Government Association was pleased with this initiative. “We think it will give students a break when they are coming to raising tuition,” a member of the Budget Committee said, “and, based on what students are saying, think a lot of campus favorites will make it into this calendar.”

The President of Hose-Hyneman-Rollins Calendar will be released in November 2019 as a fundraising effort. Plans of the professors will be uploaded to a Dropbox accessible to those on campus.

Prof-of-the-Month Calendar
Not the depression-era fundraising tool we wanted, but the one we deserve.

A Tale of Two Brothers
Biology Grad Student Finds Fallon Family Connection
Brianna Genovesio
Guest Writer

The Biomedical Engineering Department recently uncovered a special connection within Hose-Rulman’s walls. A Biomed student and graduate student explained that he definitely made me look at [Dr. Eichholz and Jimmy Fallon] in a new way, and I have a deeper appreciation for genetics.

The student worked with Dr. Peter Coppiere, who specializes in teaching genetics here at Hose-Rulman. Cold Spring Harbor Laboratory Press picked up the thesis and is planning to publish it in Volume 28

In the course of researching the project, the student found out the brothers originally hailed from New York, the sons of James and Gloria Fallon. The older, James Thomas Fallon, was born in 1974; the younger, Joseph A. Fallon (later Eichholz), was born in 1983. The two have one older sister, named Gloria for their mother, who was born 362 days before Jimmy.

In an interview for Vanity Fair, Gloria described their childhood as “difficult,” that “everyone in the family was funny...we were lucky.” Luckily they continued to be, as even the youngest Fallon, little Joseph, was relocated. After family friends Robert and Patricia Eichholz miscarried their baby in the process of moving to northwestern Illinois, the Fallons graciously loaned their youngest son to the Eichholzes for the time being. As the Eichholzes grew close to their new baby, the loan became permanent, and the adoption was finalized on November 5, 1984.

In spite of the separation, Jimmy and Joseph shared an interest in computer science and mathematics. Unlike his elder brother, though, Joseph graduated in 2005. He would go on to earn his Masters and PhD in 2007 and 2011, respectively.

The graduate student who discovered this relation was perplexed by the resemblance and decided look deeper. “It started as a hunch last fall,” the student explained. “I initially noticed there was more than a passing resemblance. After watching all of Jimmy Fallon’s videos on YouTube and sitting through all of Dr. Eichholz’s lectures, I noticed the similarities in their voice. That was what gave me the idea that there might be a family connection.”

Teb Hose Thom asked if the student thought it was odd Fallon would mention his sister, but not his brother. “Yes, I did wonder that, because I would think him bringing your brother to a family would be weird. I guess I could just ask that, but it would be weird.”

Eichholz’s thesis led to the discovery that mathematicians and mathematicians had a rather shiny sheen finish. Like most white paints, the sheen slowly turned gray as it dried.

It was quite exciting when a small bubble about 3 inches up and a foot left from the right corner was made as the first layer was applied. Sadly, the second layer was applied once the second layer was applied. The 3rd layer was especially lacking, as I truly believe it was overpainted, creating a long and uneventful dehydration.

Overall, I would give the Wevet No. 273 a 7/10. It had a few gorgeous details, but really, far too much paint. I also found that the wall tasted awful afterwards.

After growing up in Polo, Illinois, Joseph ventured to Western Illinois University in 2001, pursuing a double major in computer science and mathematics. Unlike his elder brother, though, Joseph graduated in 2005. He would go on to earn his Masters and PhD in 2007 and 2011, respectively.

The student did reach out to Jimmy Fallon’s representatives at Creative Artists Agency for confirmation, but they were unaware this was a chapter in Fallon’s life story. When it comes to approaching Dr. Eichholz, however, the student is tentative. “It’s not so much that I am unsure of the findings, I just don’t know how to ask. Hey, is Jimmy Fallon your brother? I guess I could just ask that, but it would be weird.”

Where is the Finesse?

Aleksa Tammy
Dry Paint Chair

Today I will be reviewing the drying of one of the most beloved and popular white paints in the business, the beautiful Wevet No. 273 by Farrow and Ball. It was applied to the west internal wall of a 2-story house built by the Italian painter Joe Farrezi, from the Farrow and Sons moving company.

Now let’s see what this form was quite authentic; however I found his painter tape skills to be utterly lacking. After the first layer was applied, the wall had a rather shiny sheen finish. Like most white paints, the sheen slowly turned gray as it dried.

It was quite exciting when a small bubble about 3 inches up and a foot left from the right corner was made as the first layer was applied. Sadly, the second and 3rd layer was applied without caution in their distortion, as the bubble, which popped once the second layer was applied. The 3rd layer was especially lack- ing, as I truly believe it was overpainted, creating a long and uneventful dehydration.

Overall, I would give the Wevet No. 273 a 7/10. It had a few gorgeous details, but really, far too much paint. I also found that the wall tasted awful afterwards.

Joseph and Jimmy, side by side again after almost 30 years.

The Dude Sitting Next to You

4. Preparation
   - Safely acquire all of your required ingredients and remember that you are never forced to drink alcohol (be safe, know your limits)
   - SLAP YOURSELF IN THE FACE AND MIX HALF VODKA AND HALF WATER IN A CONTAINER
   - ADD MIO OR MIO ENERGY IF YOU'RE SOFT OR IF YOUR HARD LIKE ME ADD MIO ENERGY AND GET READY TO RAGE
   - DRINK
   - WAKE UP AND GIVE YOURSELF A HUG BECAUSE YOU LOVE YOURSELF

Becoming One With Nature

Let’s eat some dirt y’all

Rich Supreme
Bear Grillz'S Second Cousin by Marriage 3 Time Removed

On campus, people may have noticed the lack of geese and the emergence of the ducks, heralding the arrival of spring. As the sun starts to shine, the pale faces of the engineers at Rose-Hulman retreat into their rooms. With the weather changing for the better, we should all be spending more time outside and connecting with nature. There are several ways that we can try it.

1. Bathing in Speed Lake: One of the most recognizable animals on campus is our favorite geese. To better connect with nature, try bathing in Speed Lake so that you can relate to the struggles of the goose better. You might even begin to understand why they have to defecate all over the sidewalks. Maybe you could try it too.

2. Eating nuts like squirrels: Another animal that is well associated with Rose-Hulman is the squirrel. If you have ever walled around campus, you may have noticed these fat little chubby buggers running around looking for trees to climb and nuts to eat. Why are the squirrels at Rose-Hulman so chubby? It’s because the squirrels all flock to Hatfield Hall, where they are fed by the students (which Bon Appetit probably won’t help you with), you can go over to Hatfield Hall and get a squirrel for access to the limited supply of nuts. Remember to go and climb some trees afterwards to spend all that excess energy from eating nuts.

3. Holding class outside: Nature is outside, and what better way to connect with it by being outside all day. However, many of you may have classes during the day, which removes you from nature. In order to improve the spiritual connection between yourself and nature, be sure to move you classes outside, and what better way to connect with it by being outside all day. However, many of you may have classes during the day, which removes you from nature. In order to improve the spiritual connection between yourself and nature, be sure to move you classes outside.

4. Enjoy the weather: There are a few ways that we can enjoy the “warm” weather:
   - Bathing in Speed Lake: One of the most recognizable animals on campus is our favorite geese. To better connect with nature, try bathing in Speed Lake so that you can relate to the struggles of the goose better. You might even begin to understand why they have to defecate all over the sidewalks. Maybe you could try it too.

Converting to Shrek

Dilemma Nosewood
Get outta her swamp
So there’s something important that I’ve been meaning to share. Last year, I converted to Shrek. The message has been very formative and I learned a lot about myself. Everybody should turn to Shrek to find themselves and find their inner ogre. As Shrek once famously said, “Ogres have layers,” but not only ogres, but everyone has layers and discovering your inner layer reveals so much about yourself.

As an Ocan ™, I have learned about the strength of being ogrekin. I no longer eat onions and bathe in the local swamp (stay out). I scare people with my large girth. I have all fairytale with a taming passion. It’s just ogre things. But I need to stress that being an Ocan ™ is not just about the lifestyle. It’s also about the ideals of Ogirion. Through my personal Shrek- oning, I grew as a person and an Ocan ™. I learned to love solitude. I learned to love myself. Like Shrek, I live my life like nobody but myself matters. I go on life changing quests that benefit nobody but myself.

You’ll never shine if you don’t glow.

Don the mask.

“You’ve got to slay the dragon” - Dr. Jordan B Peterson
Dear Winter Quarter,

I want my quarter back. No seriously. What is wrong with you? You think you can step all over me with your cold weather and your 8 a.m.’s and not expect me to do anything? I want a refund.

I wrote you this poem because you suck:

Roses are red
Violets are blue
This weather is trash
And winter quarter is too.

There’s ice on the trees
I haven’t seen the sun in a minute
It’s only week three
And this quarter is pushing my limit

I have four drop forms on hand
I’m more than ready
These classes I barely understand
Mom’s spaghetti

Why is today 75 degrees?
The only good thing about winter quarter
Is the lake gets frozen over

I want a refund.

Morning Run
William Kemp
Former Couch Potato

Off in the distance an alarm clock sounds. I look over and it reads 6:00 a.m. I put on my shorts and lace my shoes tight as I prepare for my morning run. Jogging down to the track, the sun starts to rise with a pink glow just above the treeline.

I position myself at the starting mark, I can see the official raising the starting gun in my imagination. Bang! Off I go. Running down middle field with a football in my hands I crash into the wall of men being talked for third down. “We need to rethink our strategy” number 46 says, “We can’t keep running into their defense like this.”

As we break from our huddle my arms flow backwards in perfect synchronization with the rest of my team, swirling around in the water like a true son of Poseidon. As we go into our third lateral side rotation, I push off the wall, heart pounding against my chest, desperately trying to get as much speed off the wall as I can. As I breathe, I can see my enemy next to me. I can’t lose this race. You won’t beat me this time. Not today.

We approach the wall with amazing velocity. Before looking to the scoreboard we look at each other knowing it was a close finish. Squinting to see the numbers properly, I read my time, I read his time, we had tied. A swim off would be required to see who would make it back to finals or not. We got back up on the block. “Take your mark” said the official, and as soon as the buzzer beeped its high pitch tone I left the surface with an amazing force, seemingly defying gravity.

Tucking my upper body into my legs I started my two and a half backwards flip. Dropping the tango with the air particles around me I was then greeted by the water in a perfect streamline, leaving no trace of a splash. There I found my ladder strands and started swimming in and out in a cross stitched pattern.

Once I was done clearing my breath I tossed it up to my teammate about 20 yards ahead of me. The disk dodged the hands of the enemy and landed in the firm grasp of my teammate scoring us for our first touchdown. I ran around the side lines to find the rest of my team going wild after such an amazing play. I sat down to catch my breath and looked at the time, 7:00 am, finally done with my morning run.

I have four drop forms on hand
I’m more than ready
These classes I barely understand
Mom’s spaghetti

I almost dropped my croissant

1. Landfill for "lost" term papers
2. Hunting grounds for SV317 - The Most Dangerous Course
3. "Pasture" for emeritus faculty
4. Flexible spending account/money jar burial sites
5. Wall-less and ceiling-less offices (with windows) for Math faculty
6. Faculty Dining Room version 2.0 - Brew pub - Cider pub - Wine tasting room - Distillery
7. Lab for "chemistry research"
8. Living biology lab/cultivation of "medicinal plants"
9. Rehab clinic
10. Low-rent subsidized housing for newly tenured and promoted professors

I needed to fill space at the top of the page, so please enjoy this exclusive phone background. Please send an email with questions, concerns, or content to the Thorn Flipside Editor <thorn-flipside@rose-hulman.edu> Disclaimer: The Flipside is purely for fun! Any uncredited work above can be attributed to not me, but Dr. Thom.

@PeDauw_Univ, don't focus on me, focus on the destructive Radical Liberal Terrorism that is taking place within Indiana higher ed. We are doing just fine!

I want to thank the nerd Hi Wee for his service. He came to Hose before my run against Crooked Cob Roons – it was great! Thanks H

I would like to extend my best wishes to all, even the haters and losers, on this special date, April 1.

Read low rated @Hose_Thron for first time in long time. FAKE NEWS. They called me to stop a Stibune Trarr article. I said no! Bad paper.

An 'extremely credible source' has called me and told me that @RaunchyHose's birth certificate is a fraud.

Vanderbilt? Never heard of it.

WACKY STUDENT QUOTES

"I don't care about my final grade in this class."
– A student in Dr. Burchett's Duly noted, dude, duly noted.

"Dr. B., do you ever think that students in this class are just too stupid to understand it?"
– A student in Dr. Burchett's class

"I would phrase it exactly like that.

"Does the scantron read Cheetos dust?"
– A student taking a final exam in Dr. Padgett's class

"Yes, but only number 2 Cheetos dust.

"Our experimental value has a 867400% difference from our theoretical value."
– From a student lab report in Dr. Popvic's class

"Glad to see that you are continuing to improve!

"The current grading scale makes it seem like the instructors just want to make sure that the stu-
dents actually learn the material."
– From a student evaluation in Dr. Stouder's class

"I know it seems that way, but actually...

"Ho: The data is from a normally distrusted population. Ha: The data is not from a normally dis-
tested population"
– From a student project in Dr. Evans's Six Sigma class

"I wonder what the slandered deviation is.

Are your students brainless? Do they do things so stupid that you become the highlight of lunch story hour? We want to hear about it! Send your quotes with who said it to: thorn-flipside@rose-hulman.edu. We will attribute the quote to you if you want. If you don't want your name to be attached, please say so.
