Almost as soon as the curtains opened, a "window into Rose," as Anne Houtman put it, will be covered in glass. The space where the Rotz Lab is currently situated will be turned into a courtyard.

"The Rotz Lab would be torn down after migration of parts to the BIC and the bridge, to make way for more exciting things."

The most immediate and impactful proposal is the construction of a new 60,000 square foot academic building. This would connect Myers to Moench, in the form of the popular musical: Legally Blonde.

The construction would begin in June, and finish by Homecoming, with a ribbon cutting scheduled for Homecoming.

The building is not more sophisticated in construction than the BIC, which went up in 120 days, so this target may be feasible, leaving the building to be enjoyed by current Juniors.

The Rotz Lab would be torn down after migration of parts to the BIC and the bridge, to make way for more exciting things. It's no secret that Rose has impressive utilization of its classrooms; Crapo would become primarily office space with fewer classrooms. Crapo would become mostly classrooms.

The construction began in June, and finish by Homecoming, with a ribbon cutting scheduled for Homecoming.

WEEKLY MEETINGS occur at 5:15 p.m. on the first through ninth Tuesdays of each academic quarter. All members of the Rose-Hulman community are welcome to attend.

SUBMISSION of articles, photographs, art, and letters to the editor is encouraged. Submission may be made by email to thorn@rose-hulman.edu or in person to Percopo room 031. The submission deadline is 5:00 p.m. Friday.

THE RIGHTS to accept submissions or changes made after the deadline, to edit submissions in so far as the original intent of the submission remains unaltered, and to reject submissions deemed inappropriate for print are reserved by the editors.

LETTERS TO THE EDITOR should be no longer than 600 words in length and must contain the writer’s (electronic) signature.

THE VIEWS EXPRESSED herein are those of their respective authors and with the exception of the Staff View do not necessarily represent the views of the staff or the Rose-Hulman community.
**Russia’s “Floating Chernobyl”**

**Marc Schmitt**

**Staff Writer**

Russian state-owned company Rosatom Corporation launched a floating 70MW nuclear power plant on Saturday, April 28. The world’s first floating nuclear power plant will be towed to the Russian town of Murmansk to receive fuel before heading to its final destination of Pevek, located in the Russian Arctic.

The power plant, named Akademi k Lomonosov, has been built on top of a floating barge and contains two reactors. Upon reaching its final destination, the power plant is expected to enter into service in 2019.

Rosatom announced a plan to build and put into service a fleet of seven power plants by 2015. Environmental groups have criticized the project citing concerns about the potential for a nuclear disaster on the order of the Chernobyl disaster of 1986.

“The environmental impact of Akademik Lomonosov, Russia’s latest nuclear power plant, is a growing point of concern.”

**Avengers Breaks Records**

**Marc Schmitt**

**Staff Writer**

Avengers: Infinity War shattered several box-office records, bringing in over $850 million in worldwide sales in its first week-end. The Fate of the Furious, released in 2017, was displaced from the top spot by $88 million.

The penultimate movie in the Avengers series has been 10 years in the making, builds on 18 previous movies, and features more than 40 superheroes. The still untitled Avengers: Infinity War Part 2 is expected to be released in 2019.

Marvel Studios has consistent ly produced record-breaking titles. Black Panther, the studio’s last release, grossed $1 billion in sales in just 26 days. Industry commentators were concerned that the close releases may cannibalize sales between the two movies.

“Over the course of 10 years and 18 movies, Marvel Studios movies have grossed approximately $15 billion in box office sales. Marvel Studios is continuing its drumbeat releases this year with Ant-Man and The Wasp on July 6. Captain Marvel, the studio’s following movie, will be released on March 8, 2019.”

**The Golden State Killer Mystery Draws to a Close**

**Lauren Wiseman**

**Staff Writer**

Sacramento police arrested a man believed to be the “Golden State Killer.” With the help of new evidence, a series of killings in the 1970s and 1980s have been tied to 72-year-old Joseph James DeAngelo.

DeAngelo, a former police officer, was arrested at his Sacramento home, and may be responsible for 52 murders, 45 rapes, and 120 burglaries. Sacramento police believe DeAngelo committed the majority of his crimes while serving as an officer with the Auburn Police Department; he was fired for shoplifting in 1979.

The case regained new interest when author Michelle McNamara began investigating for her book “I’ll Be Gone in the Dark.” McNamara coined the name “Golden State Killer,” though she was not able to identify the killer before her unexpected death in 2017. Despite the fact she did not uncover the killer, her widow, actor Pat ton Oswalt, asserts that the killer would not have been found without her research.

A press conference was held Wednesday, but no decision was made on when and where to hold DeAngelo’s trial.

“Sacramento police believe DeAngelo committed the majority of his crimes while serving as an officer.”

**You decide what’s news worthy.** Tuesdays, 0259 @ 5:15 p.m.
“It brought fan-favorite characters from all across the galaxy to get in one cohesive story.”

The Avengers are forced to split apart early on in the movie, with Iron Man (Robert Downey Jr.) leaving to find Gamora and kill Thanos (Jared Leto), while Thor (Chris Hemsworth) is off to war for some of the most famous superheroes of all time. Thanos is the first of their lineup to attack, but the audience has yet to see anything like Thanos. He is the most complex villain we have seen in the Marvel Cinematic Universe (MCU). He also has a lot of depth, pulling a Claudius. (For those not in the know, Claudius was the brother of the Roman Emperor Caligula. When he tried to kill Caligula, Caligula had him killed. Thanos is similar in that he is a powerful villain who is driven by a personal vendetta.)

King Arthur: Legend of the Sword

Guest Writer

Ben French

It brought fan-favorite characters from all across the galaxy to get in one cohesive story.

Avengers: Infinity War is one of the most-anticipated movies of 2018, even if you’re not much of a superhero fan. It has something to offer for anyone in the audience, and it explains enough of the story to mostly make sense to non-Marvel fans. The future of the MCU is mysterious and exciting, and we won’t have to wait too terribly long before we get some answers.

Ben French

Avengers: Infinity War made its debut on May 4, 2018, and it brought in over $106 million on opening day; now accepted input. It is on its way to becoming the highest-grossing film of the year.

In his Sherlock Holmes films, Sir Arthur Conan Doyle created a character who was known for his ability to solve complex mysteries and puzzles. This is where we meet the first of our main characters, Arthur (Charlie Hunnam). (For those not in the know, Arthur is the son of Uther and his wife, Vivien. He was raised in a castle with his friends, Merlyn and Tristram, but the untitled Avengers 4 is scheduled to be released May 3, 2019, and we know that Thanos Will Return from the credits of Infinity War. Without mentioning specific names, we know that not everyone who appeared dead will stay that way. Many of the alleged dead have standalone movies confirmed, and contracts with Marvel that have not expired. Additionally, killing off all these characters we now believe to be dead would be a financial disaster for the studio. These characters have done well in the box office from their own movies, and are ripe for sequels and more team-ups.

A super cool picture for such cool heroes

Avengers: Infinity War

Disclaimers: Minor spoilers coming through.

I found the movie to be a bit too long, with too many sequences and too much exposition. I would have liked to see the movie end more quickly, but the audience has yet to see anything like Thanos. He is the most complex villain we have seen in the Marvel Cinematic Universe (MCU).

I found the movie to be a bit too long, with too many sequences and too much exposition. I would have liked to see the movie end more quickly, but the audience has yet to see anything like Thanos. He is the most complex villain we have seen in the Marvel Cinematic Universe (MCU).
I tried a lot of new foods that I now love such as the sweet, sweet avocado.

Salad is still whack, yes all salad.

This inconvenience was essentially the only reason I could no longer pursue this diet although I fully expect to pursue it once again in the summer where I intend to cook all of my meals anyway. I really enjoy the restriction a grain-based diet has on what I can eat as it forced me to try a lot of new foods and subtleties. Some good like black bean burgers some were not as good such as soy milk. Although this is just from personal experience so to each their own.

In all, I realize that this diet is not for everyone but I definitely do urge anyone to try this diet as you can potentially live a much healthier lifestyle with this change. Along with that you can at least become a better cook as you force yourself to use some different foods that you are not typically used to. If I had to conjure up one phrase from this experiment I would say “It really isn’t that bad… Matter of fact I barely even realize what I am missing”.

Last March, the magazine “Atlantic” interviewed the conservative columnist Kevin Williamson as an opinions writer. Williamson is well known for holding extremely conservative views, one of which was that women who have abortions should be tried for murder. Taking this statement further, in a Facebook post from 2013 (since deleted) he stated that capital punishment could be a punishment for abortion, “detailing that he has a ‘soft spot for hanging’ as a form of capital punishment.”

This post led many appalled people on the internet to demand that Williamson be fired by the Atlantic. The Atlantic editor Jeff Goldberg originally defended Williamson from his detractors, however by early April a podcast of Kevin further defending his beliefs was discovered. Then came the decision to fire Kevin, causing impact within left-leaning people. I find this case of internet “mob” getting a person fired to be especially poignant in discussing the dangers of such actions. Williamson was an opinion writer who was always well known for his more extreme views. However, his work was known to be quite excellent and his writing (at times crass) hit important topic with quite different views. That he was fired for a view that many already knew he held, can be quite sadening. While Williamson’s views on abortion are extreme, they are not as uncommon as I feel many of his detractors believe.

Viewing abortion as both an act of murder and an act that should be tried as murder is quite common within more right-winged groups. It does not take much to follow that logic to the conclusion of capital punishment for those who have abortions. Therefore, Williamson’s views on abortion are not so distant from normal political thought that they are not palpable. It is also not as if those views decreased his ability to write opinion pieces for the Atlantic since he was supposed to act as a more right-winged writer to help balance out the magazine’s ideological views. This truly seems to just be a case of more pro-choice people disagreeing with the ideas of a more pro-life person, and demanding his career be irreparably harmed for holding such views.

Understand, I am not here to defend Williamson’s beliefs. I disagree with them on many points. However, I fear that in Jeff Goldberg’s decision to fire Williamson, he starts a bad precedent for both the Atlantic, journalism, and society as a whole. It can lead to the idea that only sanitized beliefs, only those acceptable to the least detractors, can be held. This can lead to terrible consequences, for those on the left, right, and center. Ideas and beliefs can vary widely, and what is acceptable to one person can be viewed as the greatest evil by another. When we create an environment that fires people for the wrong beliefs, we open the way to isolation, derision, and the control of society in the hands of the angriest mob.

“When we create an environment that fires people for the wrong beliefs, we open the way to isolation, derision, and the control of society in the hands of the angriest mob.”

“Dare to Dope?”

Ev Maquelin
Editor-in-Chief

In a January 2019 interview with Oprah Winfrey, Lance Armstrong confessed to using performance-enhancing drugs (PEDs) throughout his cycling career. Though his career had always been peppered with allegations of PED use, this confession broke the hearts of Armstrong’s fans and Lincoln community. For many, it was the end of a dream, and with it, Armstrong took down the credibility of both his teammates and the sport.

After achieving international cycling success in the early 2000s, Armstrong was diagnosed with testicular cancer and took a break from cycling. He returned in 1999, and quickly made headlines with an unprecedented 7 Tour de France victory in a row. From 1999 to 2005, Armstrong was the hero of every child with a bike. He was the perfect example of how hard work and dedication can bring anyone out of difficult situations. So why did Armstrong’s confession come as such a shock and disappointment? What is it that PED use that instantly nullifies any respect or even an athlete’s achievements?

There’s an obvious issue, of course, that PED use is strictly forbidden by most if not all professional sporting organizations. This ensures to allow a level playing field, as well as the integrity of the athlete. With many of the substances used as PEDs, improving your athletic ability, you’d be hard pressed to find a medical professional who even provides such products to you. Government has even stepped in to reduce the availability of these substances. China, once the largest and most reliable producer of anyabolic steroids, a few of PEDs that go undeated in many tests, shut down many of the manufactureres in order to make more credibility for their national teams. This leads to significant decreases in the safety and availability of PEDs for amateur athletes.

As Armstrong spoke of the “arms race of eustatics,” which intends to keep teams from reaching beyond their means while giving them the opportunity to earn expensive improvements. This is a good concept, but still places limits on the potential of an athlete or teams. We need to see sports to do their best, not their best-up.

Despite everyone’s best efforts, no regulation can be without fault and as playing field can truly introduce that level. What if instead we abandoned the concept of a level playing field, and athletes were allowed to take whatever steps they deemed necessary to succeed in their sport? As often ignored aspect of PED use is that PEDs alone do not make an individual take. There is still an enormous amount of natural talent, dedication, and effort required to succeed under their effects. Not to mention, athletes their own will on a person’s body. Imagining being forever stuck in puberty.

Discovering that an athlete has been working with PEDs should be a death sentence. They may have broken rules, but they went forth and did something no human was to be able of doing. They put it to the test to see how far, how fast, has you, and pushed their bodies to their absolute limits.

I don’t know why you watch athletes, but I do so to appreciate just how fast or the human body can go. And if they had a little help, I’m not entirely sure I care.

Just PED use. That said, forcing everyone to use the same whatever that quality of clothing staff leads to even more issues, and can easily start people up in the sport. Take a look at the various implementations of Socialism throughout history to see how well that tends to work out.

The Union of European Football Associations (UEFA) Champions League takes a stab at this problem with its Financial Fair Play (PPP) regulations. PPP prevents teams from going over what the significance of “eustatics,” which intends to keep teams from reaching beyond their means while giving them the opportunity to earn expensive improvements. This is a good concept, but still places limits on the potential of an athlete or teams. We need to see sports to do their best, not their best-up.

Despite everyone’s best efforts, no regulation can be without fault and as playing field can truly introduce that level. What if instead we abandoned the concept of a level playing field, and athletes were allowed to take whatever steps they deemed necessary to succeed in their sport?
congratulations to the team and all of the athletes on this momentous occasion.

For the men this is the 11th straight outdoor title. For the women, this is the first. So it was able to pull out a win in both games of the double header against Bluffton.

Engineers were able to past weekend. The Championships this weekend. They were up victorious for the "complete a rare history. A school record was set by having 19 strikeouts in one game. The team was able to turn victorious with an extreme winning lead of 16 runs while Bluffton only finished with 5.

Luke Buehler : 16 strikeouts
Gabbi Markison: two cassette Yeomans: RBI double to score Mandi Routon to start the lead for Rose two games this past weekend. The team was victorious with an extreme

For the first time in a ten year window, Rose-Hulman hosted the Heartland Collegiate Athletic Conference Outdoor Championships this past weekend. The Engineers were able to complete a rare “double three” to turn up victorious for the weekend. They were able to land Men and Women Cross Country Indoor and Outdoor Track and Field Titles. For the men this is the 11th straight outdoor title. For the women, this is the first. So congratulations to the team and all of the athletes on this momentous occasion.

Standout Performers
